

YASH KOTHARI *Data Scientist*

ai.work.kothari@gmail.com • 9173777900 • Ahemdabad, India • linkedin.com/in/kothari-yash

Professional Summary

Dynamic Data Scientist with over 3+ years specializing in Generative AI and advanced NLP. Proven track record in building high-accuracy AI systems and deploying robust applications. Skilled in Python and machine learning, complemented by strong problem-solving abilities and a commitment to continuous learning.

Professional Experience

01/2024 – Current Ahemdabad, India	Data Scientist Bacancy Service Pvt Ltd Data Scientist / GenAI Engineer with experience building production-grade Generative AI systems, including LLM-powered chatbots, RAG pipelines, and multi-agent architectures. Proven expertise in advanced NLP, semantic search, and multi-modal AI solutions using LangChain and vector databases. Strong Python background with hands-on delivery of end-to-end AI systems from data processing to deployment. Continuously advancing expertise through deep study of higher mathematics, machine learning fundamentals, and deep learning, backed by practical POC implementations.
05/2023 – 07/2023 Rajkot, India	Artificial Intelligence Intern Version System Pvt. Ltd. Designed & optimized an LBPH-based face recognition system in Python, achieving 96% accuracy by processing data from 80+ individuals and refining histogram distance calculations. Built & tested a Flask-based API for seamless UI integration, ensuring robustness through extensive Postman testing.
06/2022 – 08/2022 Remote	Data Analyst Intern Technolabs Software Inc. Performed data cleaning and preprocessing on a large dataset (177,157 x 260), including handling missing values, feature engineering, normalization, and exploratory data analysis using Python. Built and deployed Decision Tree and Random Forest models as a web application using Django.

Education

2024	Bachelor of Engineering Technology: Information And Communication Technology Marwadi University Rajkot
------	--

Technical Skills

• Programming: Python • Machine Learning: Supervised & Unsupervised, Evaluation • Deep Learning: Neural Networks, Model Optimization • Natural Language Processing (NLP): Text Processing • Computer Vision: Image Processing, Face Recognition	AI/LLM & Advanced Concepts: LangChain / LangGraph • Retrieval-Augmented Generation (RAG) • Prompt Engineering & Context Optimization • Semantic Search & Embeddings • Model Evaluation & Fine-tuning Concepts
--	--

Projects

AI-Powered Personal Assistant & Multi-Agent Platform (Agentic AI & LangChain) Built a scalable multi-agent AI backend using FastAPI, LangChain, and LangGraph to power an intelligent personal assistant (Sidekick AI) with real-time conversational capabilities. Designed and orchestrated specialized sub-agents for email, calendar, task, note, and messenger modules with a supervisor-based routing architecture. Implemented AI Actions framework enabling agents to perform CRUD operations across modules with structured action payloads and reference tracking. Integrated OpenSearch for semantic search and RAG-based retrieval, SSE-based streaming responses for real-time chat, and Google Cloud Storage for file handling. Built a generic upstream API service layer with token-based authentication for secure backend communication. Leveraged OpenAI and Google LLMs with personalization-driven prompt engineering to deliver context-aware, user-specific responses.
AI-Powered Financial Document Processing & Extraction System (FastAPI, OCR & NLP) Built an intelligent document processing API using FastAPI and GPT-4o to automatically extract 80+ structured data fields from financial documents. Implemented a multi-stage pipeline integrating Mistral OCR, Google Vision API, and spaCy NER for text extraction and PII masking of sensitive data. Designed a modular service-layer architecture with dynamic Pydantic schema generation, in-memory LLM caching via SHA-256 hashing, and confidence scoring for extracted fields. Delivered product-specific response summarization with detailed per-step performance tracking.
Intelligent Document Classifier & Extractor (LLM + LangChain) Developed an AI-powered document classification and extraction pipeline using LangChain, OpenAI GPT, OCR, and Computer Vision. Automatically classified multi-document PDFs, extracted structured fields via LLM-driven prompts, and applied field-level validation rules. Integrated CV-based document segmentation, OCR processing, and modular LLM workflows for scalable document automation. Deployed and scaled the solution on GCP with a modular architecture supporting easy onboarding of new document types.

Awards & Honors

Team of the Quarter Award – Q1 2026: Recognized for outstanding performance & strong team contribution, earning <i>Team of the Quarter</i> .
Spot Award: Awarded for going above and beyond to ensure successful delivery during high-pressure and critical deadlines.
